

***Investec – Pretoria.***

Hot meals were being served out of Chafing dishes at the Cafe Connect facility – this upmarket facility catered for both the Investec staff and their clients – obviously some very well-heeled people here.

The Chafing dishes on the counter certainly didn't enhance the image overall and additionally these units were heated by Chafing jelly that had to be replaced every time they were used. The cost of using this fuel was over R10 000.00 a year.

We dropped in a hot plate with a canopy that complemented the cold well and the overall look and feel, enhanced the image and saved them R10 000.00 a year.

The cost of the Hot Plate was R8 500.00 – so effectively this asset was paid off in less than a year and thereafter the saving was created.
